

Bottom Line Savings Starting the First Day

Who can benefit by using the multi-carrier CPS?

If the goals for a company's shipping system include always using the best carrier and service, reducing shipping mistakes, achieving more powerful carrier rate negotiations, timely reporting and Improving service to its customers, CPS can make a difference right away.

CPS users talk about saving on their shipping-

Take advantage of two types of "bottom line" savings with CPS. First, the initial CPS price can be thousands less than other systems. Second, CPS helps make (or automatically chooses) the best shipping choice:

"We started looking at systems two months ago, finding that prices ranged from \$22,800 to your price. We were ready to go with a system priced around \$8000 when we heard about Harvey. Although skeptical at first, due to the low cost, I quickly saw that CPS does not lack power or ease of operation." **Benchmark Display**

"We started using CPS in September. Formerly we used a free, carrier provided software product. We have lowered our cost of shipping \$0.85 per package for the 4th quarter. This has saved us tens of thousands of dollars." **Health Resources**

CPS enhances the customer's experience, too-

To streamline package shipping and provide great customer service. CPS is ready to help-

"We started using CPS in March of this year and we have shipped out over 1,500 packages with no problems. We send an e-mail out to our customers with the tracking number, a place to track it, and...with the address the package was going to, so if we have a shipping problem, we will know right away. ...we are very happy and we can spend more time selling parts from our website that receives over 350 e-mails a day for people looking for parts, not their packages!" **Tacoma Nissan Subaru**

CPS can do the job for smaller and larger shippers-

CPS is available in single station and enterprise versions. Start with the CPS package that fits best. When the shipping volume grows, it's easy to add CPS stations.

"Currently, the Alibris distribution operation incorporates six networked CPS workstations. Recently, as the demand for our wholesale order fulfillment service increased, we easily migrated several custom Harvey features to another workstation. The networking capabilities of CPS also allow us to schedule workflow efficiently, based on the variable requirements of our workload." **Alibris**

"We have CPS up and working with 50-100 shipments a day and linked it to our other software. We put a number in and it does it all! Delivery Confirmation, etc. Love it! Thanks!" **Bard Paper**

CPS users can count on excellent support-

Harvey Software's support staff is dedicated to making your shipping operation smooth and trouble-free. Support choices include: toll-free phone support; remote on-line support; 24 hour Internet help site; excellent on-line, context-sensitive help; and on-line updates to name a few.

"Just wanted to drop a quick line to say "thanks" to the Harvey support people. Although I don't need to contact them very often, they are prompt to get back to me and always very helpful, no matter how long it takes to resolve my problem. Thanks again!!" **All State Automotive**

CPS - the best experience for your shipping

The goal? Making CPS so good that its users tell us and others how much it helps their company. CPS users ship over 180 million packages per year. As small business shipping specialists, we know it's a world of choices. Every day, shippers tell us they are glad they chose CPS.

"Let me say this: "YOU ROCK!!!" Thanks for getting this done so quickly. If only the rest of the world moved as fast." **AGCO**

"I love and appreciate the CPS and just could not manage my business without it." **A2Z Uniforms, Inc.**
